Store Egg

2023

Technical Developer

Individually developed during **IT Division selection phase**, Store Egg is an e-commerce application with purchases through the application's digital currency. The app features the capability for users to both purchase and sell products. Throughout this project, I learned how to create mobile application for the first time and the importance of data types as this project is made with *React Native typescript*.
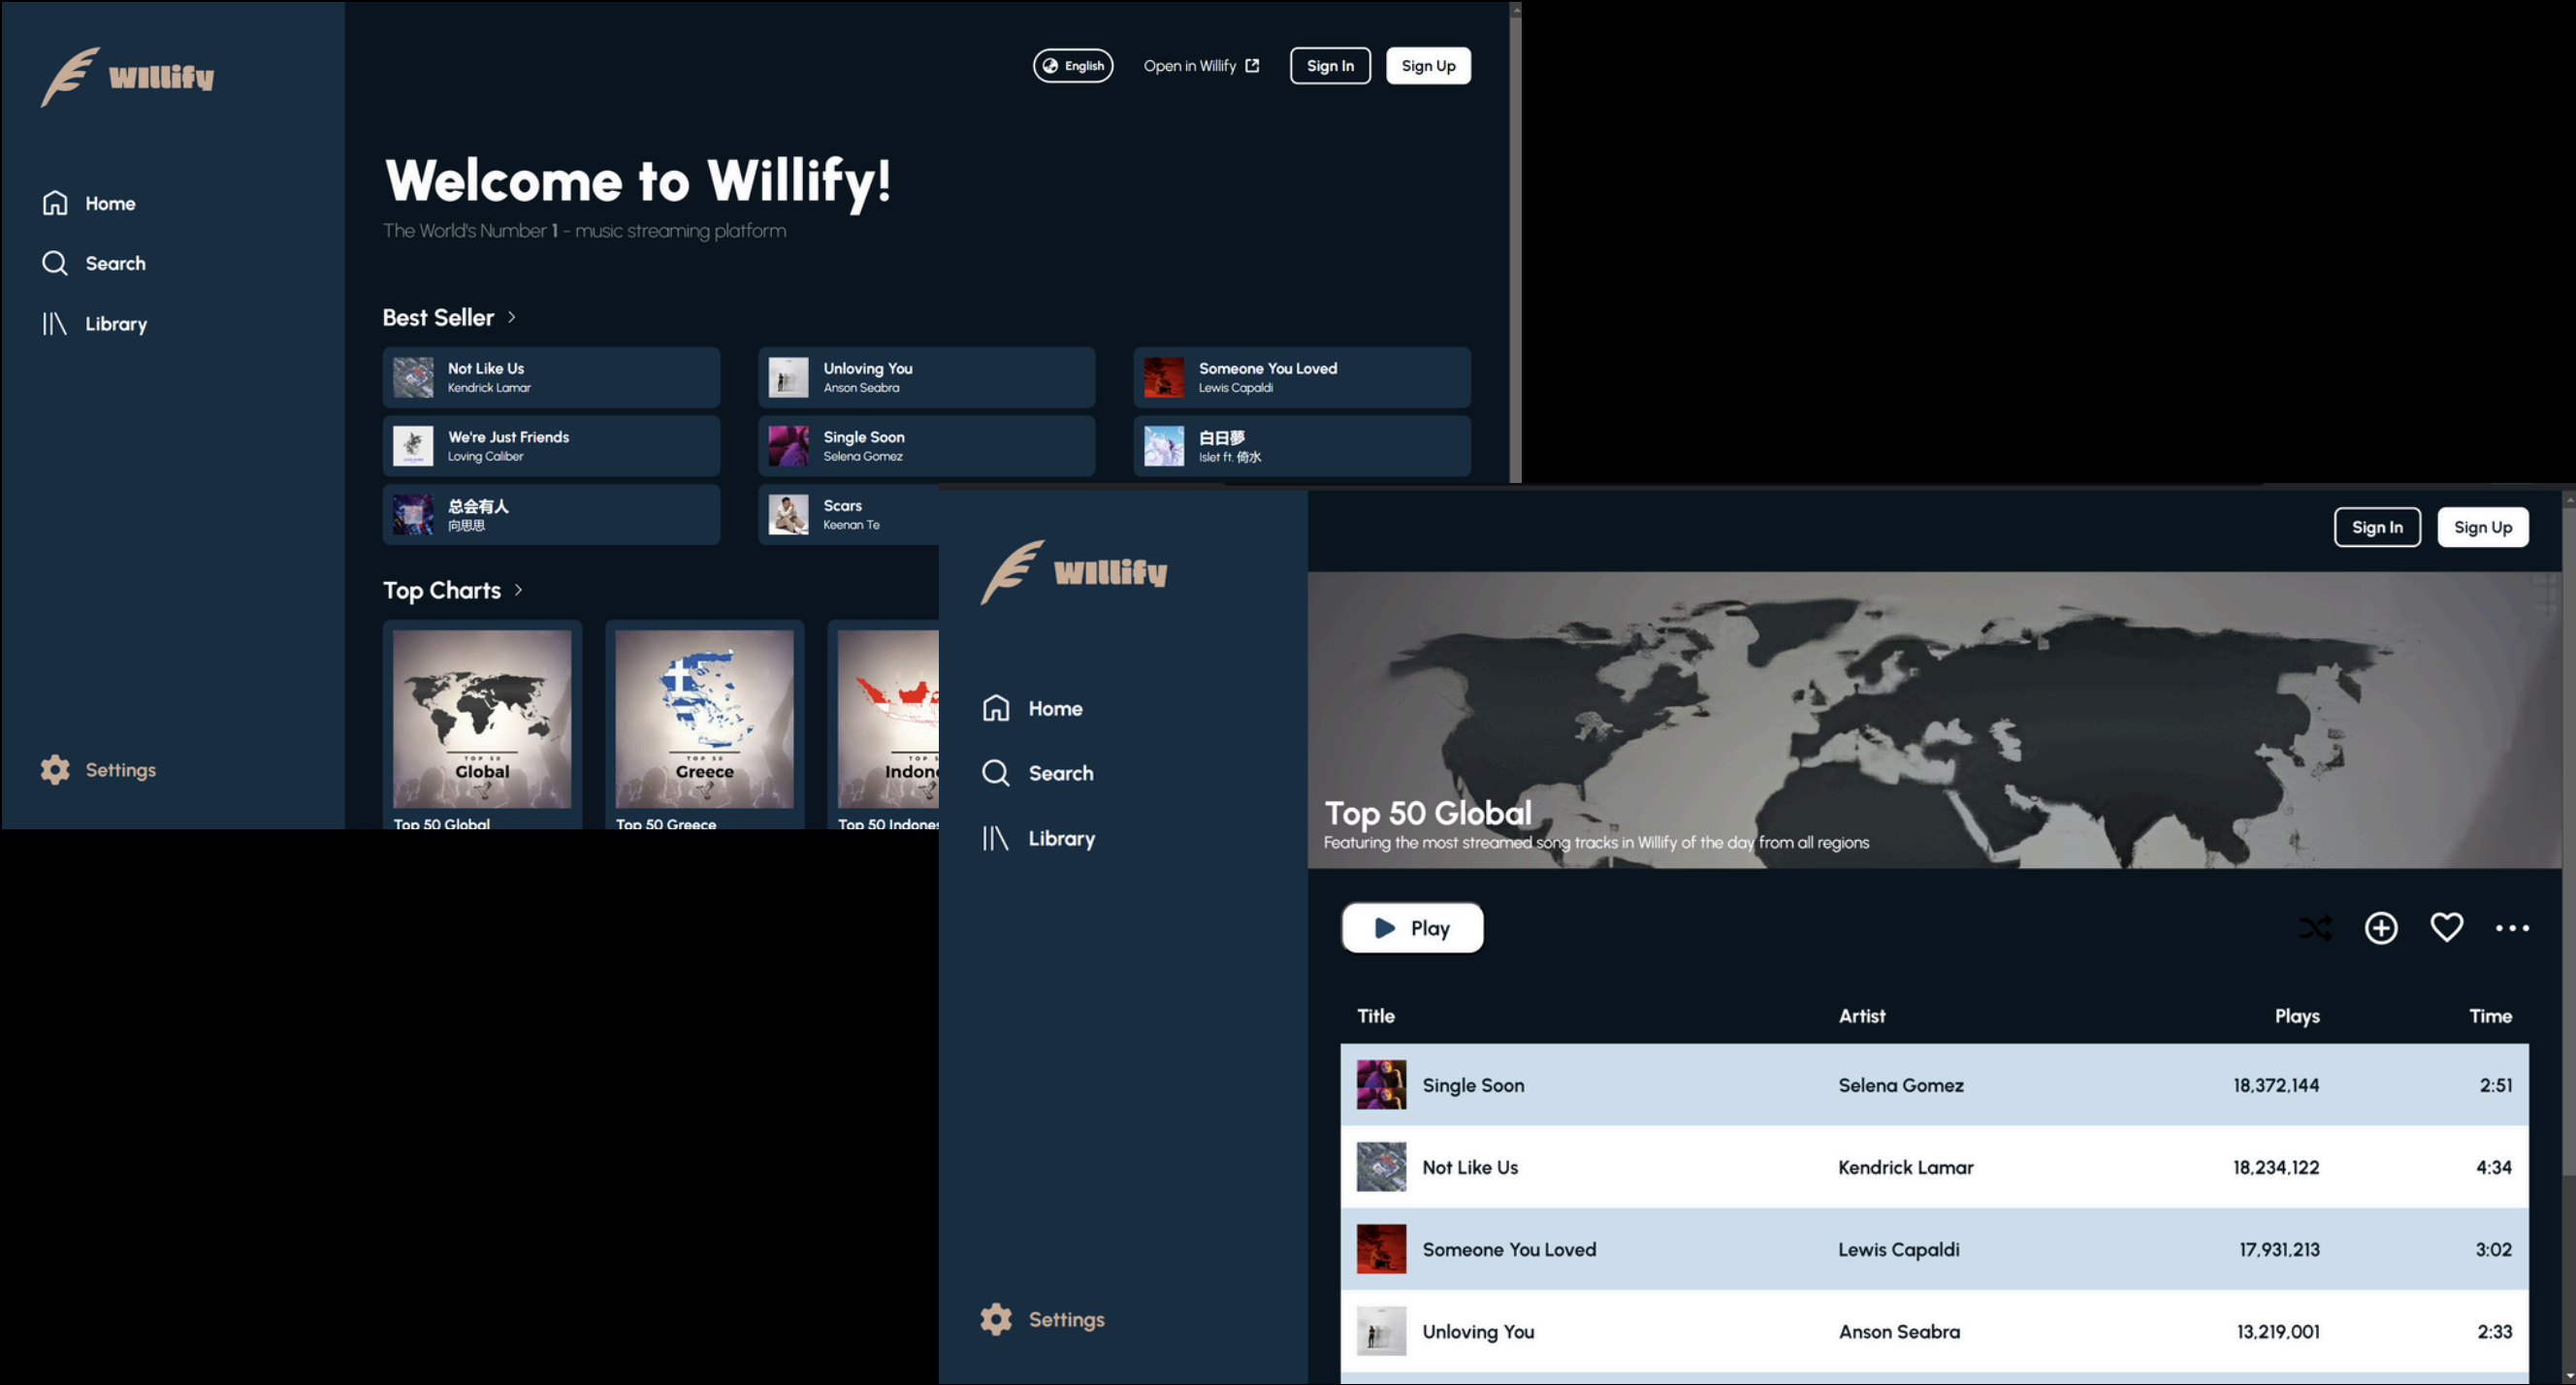

Individually developed during **HCI Class**, Willify is a static website that mimic Spotify that is used to listen to music. There are only minimum features as there are a lot yet minimum requirements for the project when assigned. The website is created with pure html, css, and javascript without any frameworks. The figma file is also in the github link below.

UI / UX Designer
Front-End Developer
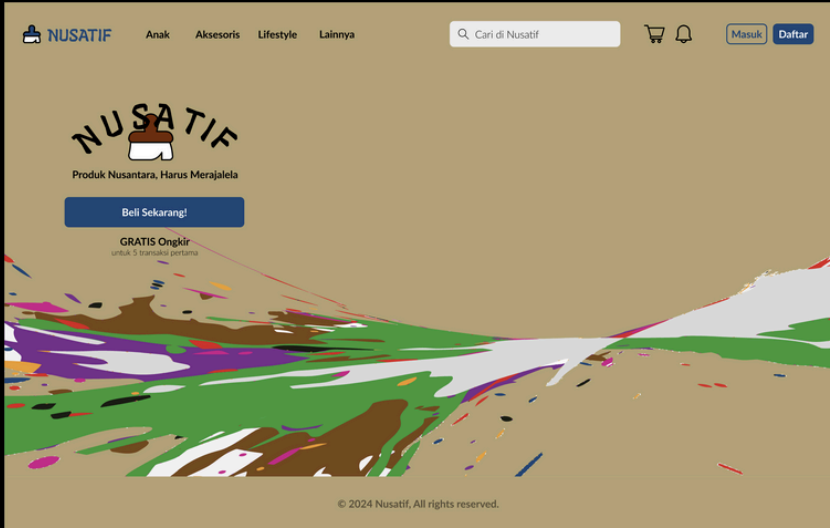

Developed for **UI/UX Design Competition**, Nusatif is an e-commerce platform that focuses on local and traditional products. The app serves a purpose to widen Indonesia's local products scope to reach more customers. This app features three main functionality which are buying, selling, as well as renting.

Developed for **HCI Class**, Concert In is a concert ticket application that sells tickets of all types of concert. Although some relatively large scaled concerts will probably be sold out before it is listed in this app as they have their own web, but for smaller scaled concerts this app will help customers to buy tickets easier as it's an all concert in one application.
